```

This purified nucleic acid comprises the vascular endothelial growth factor (VEGF) receptor Fit-1 gene promoter region. The sequence was determined from 3 overlapping clones isolated from a human placental genomic library using a human Fit-15 cDNA fragment as probe. Also claimed are: an expression vector comprising the nucleic acid molecule; a host cell transformed with the vector; and a transgence or climeric animal containing the vector. The promoter can be used to provide endothelial cell specific gene expression, and control angiogenesis. e.g. inhibition of tumour angiogenesis. The host cell or a be used to screen for compounds that regulare the activity of a VEGF receptor promoter or modulate VEGF receptor transcription or that are (ant)agonists of the VEGFVEGF receptor regulatory system (claimed). The vector can be used to treat diseases affecting the vascular endothelium, e.g. hypertension, thrombosis, atherosclerosis, restenosis, inflammatory diseases, hemosphilia, wound healing, diabetic retinopathy. Theumatoid arthritis and blood cell traficking. When it further comprises a gene encoding a protein, polypeptide, hormone, ribozyme

Vascular endothelial growth factor receptor promoter · usefui to develop products to treat, e.g. tumours, hypertension, thrombosis, atherosclerosis or inflammatory diseases

WPI; 1997-280976/25.

```
The invention relates to novel sequence and polymorphisms in the human flr-1 gene. Fit-1 is one of the two receptors for vascular endothelial growth factor (VEGFR-1). The invention also relates to a method for diagnosing one or more single uncleotide polymorphism (SNP) in human flr-1 gene. The method is useful for assessing the predisposition and/or susceptibility of an individual to diseases mediated by an flr-1 ligand, to recognise individuals who are particularly at risk from developing these conditions, and in the development of new drug therapies that selectively target one or more allelial variants of the fit-1 gene. Flt-1 polymorphisms are used in the diagnosis and treatment of cancer and angiogenic diseases such as diabetic retinopathies, psoriasis, rheumatoid angiogenic diseases such as diabetic retinopathies, osed in mapping the chuman genome and to elucidate the genetic component of the diseases, as contain a trial risk and endometricals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    useful as components in databases useful in sequence identity, genome mapping, pharmacogenetics and other search analyses. The flt-1 antagonist is useful in the preparation of a medicament for treating VEGF-mediated diseases in a human diagnosed as having a single nucleotide polymorphism at one or more of the defined positions. The present sequence is human flt-1 gene DNA fragment related to the invention. This DNA fragment
                                                                                                                                                                                                                                                                                                                                                                          Diagnosing single nucleotide polymorphism in human flt-1 gene, for assessing predisposition or susceptibility to diseases mediated by an flt-1 ligand, comprises determining the nucleic acid sequence at one or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  241 AATGTCCTTTGGTTGGACAGCCTTTAGATTAGAACCTACTGTAACAAAAAAACTCTTAAAG 300

```
The invention relates to a method for inhibiting expression of a target gene (ABL51658-ABL5177) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential uncleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known or oligonucleotides, probably because the unpaired overhand increases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention relates to a method for inhibiting expression of a target gene (ABL91658-ABL51797) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides
                                                              Human; HIV; HCV; gene expression; oligoribonucleotide; tumour; pathogen; Plasmodium; virus; virold; cytokine; prion; antisense oligonucleotide; cytostatic; virucide; protozoacide; antibacterial; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, Id developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang increases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3194 CICSCCICCCITIGAAAIGGATGGCCCCAGAAACAATTTTTGACAGGIGIACACAAICC 3253

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1 is useful in gene therapy techniques (11). (11) is useful for generating antibodies against It, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (11) and its binding partners are useful in medical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diagnostics, forensics, gene mapping, identification of mutations responsible for generic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3482 CCAAGAGCGACGTGTGTCTTACGGAGTATTGCTGTGGGAAATCTICTCCTTAGGT 3537

This nucleotide sequence encodes a novel receptor tyrosine kinase, termed KDR (see AAM80997), that is expressed on human endothelial cells. KDR is activated by vascular endothelial growth factor and mediates a mitogenic signal. It is implicated in clinical necangiogenesis. KDR CDNA was isolated from a human umbilical vein endothelial cell lambda phage cDNA library using a 576-bp DNA probe that had been generated by PCR (see also AAV99850-53). The predicted protein product has amino acid differences from the previously protein product has amino acid differences from the previously protein product has amino acid differences from the previously contains ATV (44) to Arg), 835 (Asn to Lys), 848 (Glu to Val) and 1347 (Thr to Ser), producing a protein predicted by computer modeling to have higher activity and functionality. The invention also relates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3154 CTGGCCTCCTTTGAAATGGATGGCCCAGAAACAATTTTTGACACAGTGTACACAATCC 3253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  65 CTCGACTICCTCTGAAATGGATGGCTCCTGAATCTATCTTTGACAAAATCTACAGCACCA 128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          fragment encoding human KDR, a DNA fragment encoding the intracellular portion of KDR with or without a membrane anchor sequence, purified forms of associated human KDR, and human mutant forms of KDR. KDR, fusion proteins or fragments can be used in assays to identify antagonists and agonists of human KDR (claimed). Antagonists of KDR useful for treating diseases involving neoangiogenesis e.g. diabetic retinal vascularization, cancers (e.g. brain, breast, etc.) and forms of inflammation e.g. rheumatoid artirits, psoriasis, contact dermatitis and hypersensitivity reactions. The polynucleotides are useful to screen for KDR reactions.
                                                                                                                                                                                                                                                                                                                                                                    Human receptor tyrosine kinase protein, KDR - useful e.g. to screen for antagonists useful to treat diseases involving neoangiogenesis e.g. diabetic retinal vascularization, cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antayonists/agonists and for gene therapy (e.g. by introducing a gene portion encoding a KDR protein containing functional ligand binding and membrane anchoring moieties but not tyrosine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3254 AGAGIGACGICIGGICIIIIGGIGITIIGCIGIGGGAAAAIIIIICCIIAGGI 3306

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    \delta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       즵
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents a novel type III receptor tyrosine kinase was been. A labelled ENCRY-BamHI DNA Segment derived from clone BTII1081.8 was used as a probe to rescreen a human endothelial cDNA library (#L10246) for 5'full length DNA segments of the gene from which the insert portion of BTII1081.8 is derived. A synthetic probe designed from nucleotides 3297-335 of BTII1081.8 is then used to isolate more 3' full length clones. One of the clones, designated BTIII200.2 is cloned into paluescript Ks and the synthetic oligonucleotide ICGAOCCCGC ATG GAG cloned, which esynthetic oligonucleotide CGAOCCCGC ATG GAG cloned, which esynthetic oligonucleotide ICGAOCCCGC ATG GAG cloned, which esynthetic oligonucleotide Glu, the first two amino acids encoded by the KDR gene, forming BTIIV140, which is then purified on a CScI density gradient. This was sequenced, together with BTIII081.8, and BTIII129.5 to comprise the entire ORP of 4,068 nucleotides of the KDR gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3194 CTGCCTCCCTTTGAAATGGATGGCCCAGAAACAATTTTTGACAGAGTGTACACAATCC 3253

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to determining whether a compound is capable of binding to a receptor protein complex comprising a vascular endothelial growth factor receptor? (VEGFR-2) receptor protein and a neuropilin-1 (NP-1) receptor protein. One method comprises introducing a sample comprising the compound to the receptor protein and allowing the compound to bind to the complex. Signaling through VEGFR-2 is enhanced in the presence of the NP-1 co-receptor. The methods of the invention can be used for identifying novel pro- and anti-anglogenic compounds. The present sequence represents the DNA encoding a human VEGFR-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3263 CTCGCCTCCCTTTGAAATGGATGGCCCCAGAAACAATTTTTGACAGAGTGTACACAATCC 3322

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for inhibiting expression of a target capene (ABL91658-ABL91797) in a cell by introducing at least one coligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides coligoribonucleotides for attiesense inhibition of gene expression useful coligoribonucleotides for attiesense inhibition of gene expression useful coligoribonucleotides present in pathogens (e.g. Plasmodium or viruses/virolds, pathogenic on humans, animals or plasmodium or viruses/virolds, pathogenic on humans, animals or plants) or against effective inhibition of gene expression than use of known coligonucleotides, probably because the unpaired overhang increases catability and thus intracellular concentration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes murine foetal liver kinase 1 (flk-1), a protein tyrosine kinase. Isolated antibodies, pref. monoclonal, raised against the extracellular portion of flk-1 can be used to assay for ilk receptors on the surface of haematopoletic stem cells, and to isolate positive cells. The antibodies can also be used as, or to octain ligands, which stimulate the proliferation and/or differentiation of stem cells. The ligands can be used, e.g. for treating anaemia, or bone marrow damage resulting from cancer
                                                                                                                                                                                                                                                                                                                                                           Anti-foetal liver kinase 2 (fik-2) antibodies - useful in assays, for isolating haematopoietic stem cells expressing receptor and for obtaining ligands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Murine; flk-2; flk-1; cell isolation; fetal liver kinase; receptor; monoclonal; polyclonal; antibody; tyrosine kinase; ds.

                                                                                                                                                                                                                                                                                                                                                                                                   This sequence encodes a novel human growth factor receptor, kinase insert domain containing receptor or KDR. This receptor is capable of binding to the vascular endothelial cell growth factor, VEGF and its used in a screening assay which identifies compounds that inhibit VEGF action on KDR. Such compounds which inhibit binding of VEGF to the KDR may inhibit anglogenesis and thus be useful for treating caneer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1194 CICGCCTCCCTTTGAAATGGATGGCCCCAGAAACAATTTTTGACAGAGTGTACACAATCC 3253

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRI 09-MAY-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Direct Submission Submitted (09-MAY-2001) Sanger Centre, Hinxton, Cambridgeshire, Submitted (09-MAY-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. Email enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk on May 11, 2001 this sequence version replaced gi:13274246. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as rariations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AL139005 102119 bp DNA linear PRI 09-MAY-2001
Human DNA sequence from clone RP11-95G6 on chromosome 13, corplete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               regions were either double-stranded or sequenced with an alternate
